October 24, 2019 (Ogden, Utah) – Members of the American Racing Pigeon Union have expressed a desire to utilize live clocking. This would be a tremendous benefit to those members that currently must drive a significant distance for knock off at the club house.

The AU is proud to announce that the AU board of directors has approved and certified both Benzing Live and Top Pigeon clocking systems to allow the use of their live/remote arrival features to be used in AU sanctioned races. Both systems have been found to be secure and to meet the requirements of the AU.

As per AU race rules the need to print both basketing and arrival lists are still needed and retained for the required period.

As other systems are approved and certified by the AU, members will be notified.
